

Bill of Materials/Kitting

Improve the efficiency of this critical operation

Much of the success of your distribution business depends on your ability to supply existing customers and attract new customers with the right products at the right time for the right price.

Intrust Win Bill of Materials/Kitting can help you do just that. It is a fully integrated application that allows distributors as well as light manufacturers to define, build, and sell “kitted” inventory items based upon a Bill of Material like formula.

Bill of Materials/Kitting is fully integrated with *Intrust Win* Inventory and Sales Order. Increase the number of options you can offer by utilizing the Bill of Materials/Kitting component information. It gives you the ability to mix and match related assemblies into a single kit. Easily determine whether you have enough stock to assemble an order, or use the “available to build” function to determine how many of any given item you can build. It’s easy to review a bill of material or print a list of all components required for a particular assembly.

Improve your bidding success. You can quickly assess the cost of assemblies and then use the Transaction History Report in *Intrust Win* Inventory to compare anticipated costs with the actual costs associated with similar assemblies. You’ll also improve accuracy and save time.

Intrust Win produces a separate Work Order for every kit or BOM included on a Sales Order in addition to the normal Pick Ticket.

Type	Item ID	Location ID	Unit	Quantity	Unit Cost	Ext Cost
Item	135	TX0001	EA	1	50.0000	50.00
Item	HCS04C00125	TX0001	EA	5	.0400	.20
Item	SB040012SZ	TX0001	EA	10	.7000	7.00
* Item				1	.0000	.00

The Bill of Materials application lets you build kits or assemblies to stock or to order. Kitted items can be modified at Sales Order time to fit the specific requirements of the customer. Kit materials are properly relieved from inventory and accounted for in item usage.

Additional Bill of Materials/Kitting Features:

- maintain accurate inventory quantities for your assemblies or raw materials
- relieve materials and receive finished goods in one process
- build non-serialized assemblies that contain either serialized or non-serialized materials and components
- build serialized assemblies that contain either serialized or non-serialized components and materials
- change components for a group of select items with the global replacement of items
- set up your kits with unique inventory numbers and include an unlimited number of components, each with its own item number
- separately track the costs of the components but assign the price to the kit enter builds before, during or after the fact
- easily develop kits for sale and, if necessary, adjust the content of each kit at order entry time
- view a bill of materials in an explorer-style inquiry

Bill of Materials/Kitting Reports:

- Item Where Used Report
- Bill of Materials Definition/Exploded Bill Report
- Bill of Materials Work Order
- Global Replace Log
- Component Cost Report
- Kitting List
- Available Components Report
