

NewVision Distribution Software

Providing the Power for Your Distribution Business

e-Connect / e-Commerce

e-Connect gives you the tools you need to complete in today's rapidly expanding e-Commerce environment. E-Connect is integrated with the other NewVision modules to give you a complete seamless interface for your business-to-business and business-to-consumer requirements. E-Connect can be implemented as a presence website, a catalog website, or a fully-featured shopping website.

On-line Order Form

Order On-Line

Your customer or prospect can access your inventory products several ways. E-Connect will display the requested item(s). Displaying quantities available per item is an option.

Additional information, such as pictures and specifications, can be accessed from each item. Ordering items is simple and straightforward. Simply enter the quantity desired and add the item to the order. A running dollar total of the order is maintained. Based on the login and password, the order is placed at the customer's special price. The selected items and quantities on the order form can be viewed at any time and when the order is complete, submitted for processing.

Security

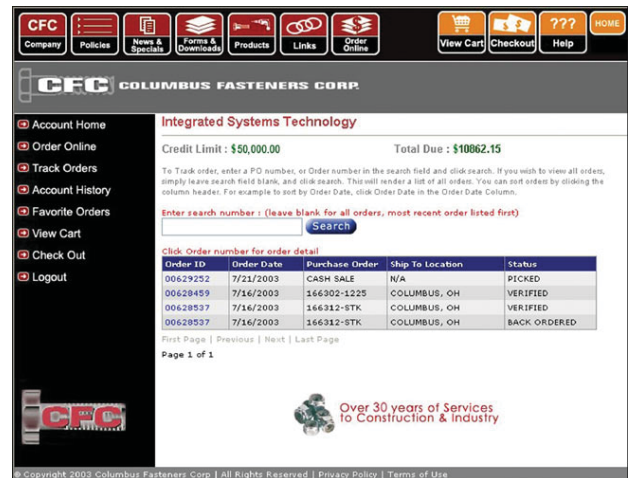

A login and password are required to enter the system. Only those authorized with a login and password can access order entry, pricing and other customer sensitive data. The customer only sees information associated with their ID.

Favorite Orders

Your customer can store multiple favorite orders. By going into order entry the customer can call up and submit a favorite order without having to re-key the information. Customers may modify favorite orders before completing the new order.

Account Receivable Status

Based on the login and password, the system will present the customer's Accounts Receivable Aging. The customer can drill down to the individual transactions that make up the aging, and even print an invoice that they may be missing.

Shipment Status

Shipment Status

Your customers can access shipment information to determine the status of previously placed orders. This allows the customer to determine if, and when, an item was shipped and the tracking number for tracing the shipment.

Account Update

The customer can make changes to their demographic information on billing and ship-to records.

Accounts Receivable Status

Account Receivable Status

Based on the login and password, the system will present the customer's Accounts Receivable Aging. The customer can drill down to the individual transactions that make up the aging, and even print an invoice that they may be missing.

Account Update

The customer can make changes to their demographic information on billing and ship-to records.

Credit Cards

Your customer or prospect can use credit cards for purchases. The validity of the credit card is authorized on-line before the purchase transaction is approved.
