

## *If You're Shipping via UPS...*

### *You Should Be Using Freight Connect!*

*Freight Connect will tie together your IST Intrust Software and the UPS WorldShip Software and eliminate the following:*

Setting up and maintaining customer files and their Ship-to Addresses in the UPS WorldShip System.

Manually posting the freight charges generated by the WorldShip Software to your customer accounts in the *IST Intrust Software*.

*Freight Connect is easy to use.* Here's all you have to do to make the connection:

You will run a routine that exports the verified or picked Sales Orders to a text file that is picked up by the WorldShip System. You can run this routine as many times a day as you need to. Simply bring up the exported Sales Orders in WorldShip and ship against them.

After closing out shipping, run another routine that imports the freight charges to a text file that is picked up by the *IST Intrust Software* and posts the charges to the customer accounts.

*Freight Connect offers you a number of benefits:*

***Time savings.*** You eliminate two time consuming chores.

***Increased Accuracy.*** Freight charges move from the UPS WorldShip Software directly to your *Intrust Software*.

***Eliminate lost charges.*** The direct connection from UPS WorldShip to *Intrust* eliminates the possibility of lost freight charges.

**Save time, eliminate the hassle and improve accuracy!  
Call us today about getting started with *Freight Connect*.**

***NEW!*** A master file allows you to set up freight rules by customer.  
Now you can let the system handle freight exceptions.
