

If You're Doing Bin Stocking...

You Should Be Using Fill and Bill!

This IST add-on module when coupled with a portable hand-held data terminal with an integrated laser scanner allows you to capture the data necessary to create a sales order while you are at the customer's site.

The captured data is then transmitted via cable or modem to your IST Intrust software, a sales order is automatically generated, and the Pick Ticket produced.

- No more manual entry*
- No more mis-keying of the data – increase your accuracy*
- Truly a time saver*
- Allows you to be more competitive = more profitable*

The Tag File option included with this package significantly increases the capabilities of the Fill and Bill System.

- You can set a re-order quantity which automatically enters a quantity when the item is ordered.*
- The Tag File maintains bin location, bin stocking sequence, unit of measure, minimum and maximum quantities and other information about the customer and product.*

The hand-held data terminal's communication capability makes it possible to support your bin stocking customers whether they are around the corner or geographically remote.

Fill and Bill allows you to compete with the "big boys" and be a strong player in the industry.

Save time, eliminate the hassle and improve accuracy!
